Finally, the data related to procedural rates for OAC insertion in our analysis are from a number of different LMICs with very different national health systems, and we were not able to account for the effect of socioeconomic status on treatment rates. Conclusions {#sec5} ===== Universal OAC treatment with warfarin is cost-effective in LMICs at various willingness-to-pay thresholds from \$1009 to \$1496 per QALY gained. Conflicts of Interest: None declared. The list of LMICs included in the CE analysis. CE : cost-effectiveness CVD : cardiovascular disease EU : European Union LMICs : low- and middle-income countries LMST : low-mortality short-term MACE : major adverse cardiac events MST : mortality short-term QALY : quality-adjusted life year RCT : randomized controlled trial SAC : sub-Saharan African countries UF : upper-middle-income countries It is convenient to be able to operate on injured or diseased teeth with a number of dental tools, such as curettes, dental picks, excavators, air-polishing instruments, drills, and the like. It is also advantageous to work on teeth that have received a restorative procedure. If the teeth are not properly aligned during restoration, the teeth may be malpositioned and require additional braces and/or orthodontic procedures to move the teeth into the correct position. Ideally, the tooth should be aligned at the conclusion of the orthodontic procedure and be in the correct position for the final restorative procedure. Often, the treatment procedure is decided based on the quantity and quality of the patient's original teeth, and the final tooth position will be quite different than the original tooth positions. Due to the timing of treatment
